Acquisition of Digital Resources

October 2010

A critical component of the Acquisition of digital resources project is the development of a Digital Learning Resources Management System. This system will allow us to support the effective and efficient acquisition, creation, access, storage and delivery of digital learning resources. We are currently looking at a number of products that will provide us with the tools to allow us to achieve this goal.

As of September 2010 we have received responses, and short listed vendors who addressed our request for proposals. We are in the process of engaging in presentations from these short listed vendors and anticipate having a recommendation for our purchasing department by mid October. In addition to this progress on the management system we are also finalizing the details of a RFP for digital content. In this process we have sought the input from a variety of stakeholders within the CBE.

Providing a wide range of rich digital resources for the staff and students of the CBE supports a personalized learning model. It is an exciting time to be working to provide such a variety of engaging and current resources for our system
