Acquisition of Digital Resources

May 2010

Digital Learning Resources Management System

A critical component of the Acquisition of digital resources project is the development of a Digital Learning Resources Management System. This system will allow us to support the effective and efficient acquisition, creation, access, storage and delivery of digital learning resources. We are currently looking at a number of products that will provide us with the tools to allow us to achieve this goal.

To ensure that we find the product that best meets the needs of the CBE we are preparing a Request for Proposals (RFP) which outlines the requirements of the new system. To assist the team in this work we have hired a project manager to facilitate the process and are gathering a group of CBE stakeholders including teachers to review the document.

We are expecting to post the RFP towards the end of June, evaluate the responses from vendors by mid-September and select a successful submission by mid-October.
